

Functional & Performance Testing Template

Model Performance Test

Date	31 March 2026
Team ID	SWTID-2026-4754
Project Name	Automating Employee Data
Maximum Marks	

Test Scenarios & Results

FT-01: Text Input Validation (Employee Name, Job Role, etc.)

Test Steps: Enter both valid and invalid text in input fields (e.g., numbers in name field, empty input).

Expected Result: Valid inputs should be accepted, and invalid inputs should show error messages.

Actual Result: System accepts valid inputs and displays error messages for invalid entries.

Result: Pass

FT-02: Number Input Validation (Salary, Age, Experience)

Test Steps: Enter numbers within valid range and also out-of-range values.

Expected Result: Valid numbers should be accepted, and invalid values should show errors.

Actual Result: System correctly validates inputs and restricts invalid values.

Result: Pass

FT-03: Data Processing / Report Generation

Test Steps: Enter employee details and generate reports.

Expected Result: System should generate accurate reports based on input data.

Actual Result: Reports are generated correctly with accurate employee data.

Result: Pass

FT-04: Database Connection Check

Test Steps: Perform operations like add, update, and delete employee records.

Expected Result: System should successfully connect to the database and perform operations.

Actual Result: Database operations are executed successfully without errors.

Result: Pass

PT-01: Response Time Test

Test Steps: Measure time taken for system response (e.g., loading dashboard, saving data).

Expected Result: Response time should be under 3 seconds.

Actual Result: System responds within 1–2 seconds.

Result: Pass

PT-02: System Load Test

Test Steps: Perform multiple operations simultaneously (e.g., multiple users accessing system).

Expected Result: System should handle load without slowing down.

Actual Result: System performs efficiently with minimal delay.

Result: Pass

PT-03: File Upload / Data Load Test

Test Steps: Upload multiple employee records or bulk data.

Expected Result: System should process data smoothly without crashing.

Actual Result: Data upload and processing completed successfully.

Result: Pass

Conclusion :

All functional and performance test cases passed successfully. The system is stable, efficient, and performs well under normal and moderate load conditions.
