

Project Design Phase
Problem – Solution Fit Template

Date	02 April 2026
Team ID	SWTID-2026-4754
Project Name	Automating Employee Data
Maximum Marks	2 Marks

1. Problem Statement :

Organizations face difficulties in managing employee data manually.
Common issues include:

- Time-consuming data entry and updates
- Errors in maintaining employee records
- Difficulty in accessing and retrieving information
- Lack of proper data security and backup

2. Target Customers

- HR Managers
- Company Administrators
- Employees in organizations

3. Customer Problems (Pain Points)

- Manual paperwork leads to inefficiency
- Data duplication and inconsistency
- Difficulty in tracking employee details
- Delay in report generation
- Risk of data loss

4. Existing Solutions

- Manual record keeping (files, Excel sheets)
- Basic database systems with limited features

Limitations:

- Not automated
- Lack of security
- Not user-friendly
- Limited scalability

5. Proposed Solution

An Automated Employee Data Management System that:

- Stores employee data digitally
- Provides secure login and authentication
- Allows easy updating and retrieval of records
- Generates reports instantly
- Ensures data backup and security

6. Problem–Solution Fit

The proposed solution effectively addresses customer problems by:

- Reducing manual effort through automation
- Improving accuracy of data
- Providing quick access to employee information
- Enhancing security using authentication and encryption
- Saving time and increasing productivity

7. Benefits

- Faster operations
- Improved data management
- Better decision-making through reports
- High user satisfaction
- Scalable for future growth

Conclusion :

The solution aligns well with the customer's needs and solves key problems efficiently. This ensures better adoption and usability of the system.
