

Project Design Phase Proposed Solution Template

Date	03 April 2026
Team ID	SWTID-2026-4754
Project Name	Automating Employee Data
Maximum Marks	2 Marks

Proposed Solution Template:

1. Problem Statement (Problem to be solved)

Organizations face difficulties in managing employee data manually. This leads to errors, duplication of data, time consumption, and lack of real-time access to important information.

2. Idea / Solution Description

The proposed solution is to develop a centralized web-based system that automates employee data management. It will handle data storage, updates, attendance tracking, and report generation efficiently, ensuring secure and easy access.

3. Novelty / Uniqueness

The system includes unique features such as real-time data updates, role-based access control, and dashboard analytics. These features reduce manual work and improve decision-making.

4. Social Impact / Customer Satisfaction

This solution improves organizational efficiency and reduces the workload of HR staff. It ensures accuracy in data handling and provides employees with quick and transparent access to their information, increasing satisfaction.

5. Business Model (Revenue Model)

The system will follow a subscription-based model where companies pay monthly or yearly fees. Additional revenue can be generated through premium features like advanced analytics and customization.

6. Scalability of the Solution

The solution is scalable and can be used by small, medium, and large organizations. With cloud integration and modular design, it can handle increasing users and data efficiently.
