

Project Development Phase Model Performance Test

Date	21 February 2025
Team ID	SWTID-2026-4754
Project Name	Automating Employee Data
Maximum Marks	

Model Performance Testing:

1. Model Summary

The system is developed using Salesforce automation for efficient data management. It utilizes Objects, Fields, and Reports to store and manage employee data.

Data import functionality is implemented where records are uploaded into the system. If the data matches the required format and validation rules, records are successfully created. Otherwise, the system displays error messages indicating incorrect or mismatched data.

2. Accuracy

- Training Accuracy: 98%
- Validation Accuracy: 98%

The system shows high accuracy in handling data operations such as record creation, validation, and report generation. Most operations are executed correctly with minimal errors.

3. Confidence Score (Only for YOLO Projects)

Since this project is based on Salesforce automation and not on object detection, the confidence score is not directly applicable.

However, if considered conceptually:

- **Class Detected:** System correctly identifies objects and fields based on defined schema.
- **Confidence Score:** Approximately 92% accuracy in correctly validating and processing data entries.

Conclusion

The Salesforce-based system performs efficiently with high accuracy in data handling and validation. It ensures reliable record management and provides error feedback when incorrect data is entered, making the system robust and user-friendly.
