

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 April 2026
Team ID	SWTID-2026-4754
Project Name	Automation Employee Data
Maximum Marks	4 Marks

1. Data Flow Diagram (DFD)

A Data Flow Diagram (DFD) is a graphical representation that shows how data flows through a system. It helps in understanding how input data is transformed into output through processes.

Key Components of DFD:

1. External Entity – Source or destination of data (e.g., Employee, Admin)
2. Process – Activity that transforms data (e.g., Update Employee Record)
3. Data Store – Storage of data (e.g., Employee Database)
4. Data Flow – Movement of data between entities

Level 0 DFD (Context Diagram)

Description:

This diagram represents the overall system as a single process and shows interaction with external entities.

Entities:

- Employee
- Admin

Process:

- Employee Data Management System

Data Flows:

- Employee sends personal details

- Admin sends update requests
 - System returns reports and confirmations
-

Level 1 DFD

Processes:

1. Add Employee Data
2. Update Employee Information
3. View Employee Records
4. Generate Reports

Data Store:

- Employee Database

Flow Explanation:

- Employee enters data → Stored in database
 - Admin updates records → Database updated
 - System retrieves data → Displays reports
-

2. User Stories

User stories describe system requirements from the user's perspective.

Format:

"As a [user], I want [function], so that [benefit]."

User Stories for Employee Data System

1. Employee Registration

- As an employee, I want to enter my personal details so that my information is stored in the system.

2. Update Information

- As an admin, I want to update employee data so that records remain accurate.

3. View Records

- As an employee, I want to view my details so that I can verify my information.

4. Search Employee

- As an admin, I want to search employee records so that I can quickly find specific data.

5. Generate Reports

- As an admin, I want to generate reports so that I can analyze employee data.

6. Delete Employee

- As an admin, I want to remove employee records so that outdated data is deleted.

Conclusion :

The Data Flow Diagram provides a clear visualization of how data moves within the system, while user stories help in understanding user requirements. Together, they ensure a well-structured and user-centered system design.
